Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

Wash. D.C. Area 366-0123

Case Vehicle (A): 2000 Dodge
Type: Ram 1500, 4x4 pickup
Driver: 26-year-old female
CDC: 12-FCEN-1, 12-FLEE-5, 03-RFEN-1

SITUATION

(Slides 1, 2) On a foggy night, case vehicle (A) was traveling south at an unknown speed on an asphalt road, in a rural area. The road surface was dry, it was dark, and the speed limit was 50 mph (80 kph). The driver of case vehicle (A) had been drinking alcohol and taking drugs.

(Slides 3, 4 and 5) The vehicle exited the west edge of the road, traveled in a small ditch, and struck a sturdy mailbox with the center of the front bumper. (Slide 6) The mailbox post was very sturdy and was cemented in a large square slab of concrete. (Slides 7, 8, 9, 10, 11 and 12) The vehicle continued to travel south off the road, crossed a private drive, and struck a 54-cm diameter tree, with its left front. After the impact with the tree, the vehicle rotated counterclockwise and struck a wooden fence post with its right fender. The driver was found unconscious in the vehicle approximately 1-3/4 hours after the crash occurred. The vehicle was towed from the scene due to damage. The police reported "A" injuries and the driver was transported to the hospital by ambulance. Her blood alcohol content was .18 percent and her blood tested positive for opiate drugs.

GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slides 13, 14) The direct damage to the front of case vehicle (A) from the first impact with the mailbox was to the center of the front bumper. It extended 15-cm across the front with a maximum crush of 10 cm. The second impact with the tree was the most severe. It began at the left-front bumper corner and extended 40-cm across the front, resulting in 23-percent vehicle overlap. The maximum crush was 37 cm to the left-front bumper corner, and the direct damage extended 140-cm rearward along the left fender. The third impact with the fence began at the right-front bumper corner and extended 40-cm rearward along the right fender. The maximum crush was 5 cm to the right fender.

DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

Exterior

(Slide 22) The front bumper and grille were severely damaged, and both headlights were broken. (Slides 23, 24 and 25) The left side of the hood from the impact with the tree was severely crushed rearward, the hood latch was damaged and released, and both hood hinges were damaged but not separated. The rear edge of the hood was elevated, but it is unknown if it contacted the windshield. (Slide 26) The windshield was probably cracked due to the impact, but the rescue team removed the windshield to extricate the injured driver. In addition, the roof was deformed.

(Slides 27, 28) On the left side, the fender was severely crushed due to the impact with the tree. The left upper and lower A-pillars were probably deformed due to the impact, but the upper A-pillar was also cut by the rescue team during extrication, making damage assessment difficult. (Slides 29, 30) Both left wheels were damaged and the left wheelbase was decreased by 30 cm. (Slide 31) Also, the driver door was damaged and jammed closed, the driver-door window glass was broken, and the window frame was severely bent. (Slide 32) The upper and lower B-pillars were deformed and the left side of the truck bed was deformed. (Slide 33) There was no visible damage to the rear of case vehicle (A).

(Slide 34) On the right side, the fender was damaged from the impact with the fence post. (Slide 35) The right-front wheel was damaged and the right wheelbase was increased 6 cm. (Slide 36) The rescue team removed the right door, but the door window glass was not broken. It was probably deformed in the sequence of impacts, and may have been jammed closed. (Slide 37) The right-upper A-pillar was cut, but was probably also deformed from the impact. (Slide 38)) The truck bed was deformed on the right side.

Interior

(Slides 39, 40) This vehicle is equipped with steering-wheel and passenger frontal-impact airbags, which deployed, probably during the severe impact with the tree. (Slide 41) There was no damage to the frontal-impact airbags, and there was blood and black marks on the steering-wheel airbag skin. (Slides 42, 43) The upper half of the steering-wheel rim was bent, and the steering column was rotated upward and to the right. (Slides 44, 45, 46 and 47) The upper and mid portions of the

instrument panel, and the knee bolster were damaged, and there were scuff marks on the left and right portions of the knee bolster, indicating driver knee contact. There was also a possible scuff mark on the upper instrument panel. (Slide 48) The driver door interior was damaged due to impact, and was bowed out due to driver loading. Also, the driver-door hardware and armrest were damaged, and the door window glass was broken. (Slides 49, 50) The roof siderail, roof headliner, and the roof structure were damaged in the driver area, and there was also damage to the left A-pillar and windshield top moldings. (Slides 51, 52 and 53) There was also damage to the center console, the transmission selector on the column, the instruments on the dash, and the parking-brake release pedal. (Slide 54) The brake pedal was completely separated from its linkage, and was deformed. (Slides 55, 56) The glove compartment was deformed, but the rear-view mirror was not broken. The driver-seat backrest and cushion were damaged, the seat was rotated to the left, and the seat adjuster was jammed. Also, the center armrest was damaged. (Slides 57, 58 and 59) The following intrusions were noted and measured:

Location	Component	Distance (cm)	Direction
driver	knee bolster	79	to rear
	toe pan	72	to rear
	instrument panel	55	to rear
	A-pillar	45	to rear
	steering column	40	to rear
	windshield header	4	to rear

OCCUPANT KINEMATICS AND INJURIES

(Slide 60) The 26-year-old, 5-ft, 10-in, 140-lb female driver was not wearing the available three-point belt, and the airbag deployed. (Slides 61, 62, 63 and 64) No visible evidence of belt use was found on the belt webbing, the D-ring, or the latch assembly.

(Slides 65, 66) During the frontal impacts, the unbelted driver moved forward and to the left relative to the vehicle interior. (Slide 67) The airbag probably deployed during the severe impact with the tree, offering the driver's chest and torso some protection. (Slides 68, 69, 70, 71, 72 and 73) However, she apparently skipped off of the airbag to the left and struck her head on the top of the driver door at the beltline where it meets the window frame, as evidenced by blood, skin, and clumps of hair in this area. (Slides 74, 75) Her head may have also contacted the upper portion of the instrument panel, as indicated by a scuff mark on the broken panel. There was also a possible scuff mark on the left A-pillar cover, indicating possible head contact.

The driver sustained severe head and facial injuries from the contact with the top of the driver door at the junction of the window frame. These include axonal shear injuries to the cerebrum, cerebral laceration, petechial hemorrhage to the corpus callosum, and a subdural hematoma to the cerebrum. Also, she sustained cerebral contusions to bilateral frontal lobes, and a basilar skull fracture without a CSF leakage. In addition, she sustained a 6-cm laceration to the left side of her forehead, a 3-cm laceration to the center area of her forehead, and lacerations to her left eyelid.

(Slide 76) She sustained abrasions to her left and right shins from contact with the knee bolster, as evidenced by scuff marks on the bolster panel. (Slides 77, 78) Although scuff marks and outward bowing of the driver door indicate driver contact with the door interior, no corresponding injuries were reported.

The following table and attached drawing (slide 79) summarize the injuries for the unbelted driver.

Occupant: Driver
 Restraints: 3-point belt not worn; airbag deployed

Age: 26 years
 Stature: 178 cm (5 ft, 10 in)

CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.

- (1) LEFT (3) RIGHT INDIVIDUAL SEAT
- (1) LEFT (2) CENTER (3) RIGHT BENCH: FULL WIDTH 3 PASSENGER
